

# R: a continued short course

William Revelle

Northwestern University  
Evanston, Illinois USA

[http://personality-project.org/r/book/Smep\\_R\\_course.pdf](http://personality-project.org/r/book/Smep_R_course.pdf)

October, 2010

# Outline

- 1 Getting started
  - Installing R on your computer
- 2 Review of basic R
  - Basic R capabilities
  - Review of basic concepts
- 3 Installing and using packages
- 4 Using the psych package
  - Descriptives
  - Latent variable analysis through factor analysis and cluster analysis
  - Item Response Theory through factor analysis
  - Understanding statistics by simulation
- 5 Conclusion

## Getting Started with R

- Download from R Cran (<http://cran.r-project.org/>)
  - Choose appropriate operating system and download compiled R
- Install R (Version 2.11.1 or 2.12.alpha)
- Start R
- Add useful packages
  - `install.packages("ctv")` #this downloads the task view package
  - `library("ctv")` #this activates the package
  - `install.views("Psychometrics")` #among others
  - Take a 5 minute break
- Activate the package(s) you want to use today (e.g.,)
  - `library(psych)` #necessary for most of today's examples
  - `library(sem)` #will be used for a few examples
- Use R

## Start up R and get ready to play

```
R version 2.12.0 alpha (2010-09-22 r52970)
Copyright (C) 2010 The R Foundation for Statistical Computing
ISBN 3-900051-07-0
Platform: i386-apple-darwin9.8.0/i386 (32-bit)
```

```
R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.
```

```
Natural language support but running in an English locale
```

```
R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.
```

```
Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
```

```
Type 'q()' to quit R.
```

```
[R.app GUI 1.34 (5584) i386-apple-darwin9.8.0]
```

```
[Workspace restored from /Volumes/WR/bill/.RData]
```

```
> # > is the prompt for all commands #is for comments
```

## Annotated installation guide

```
> install.packages("ctv")
```

```
> library(ctv)
```

```
> install.views("Psychometrics")
```

```
> #or
```

```
> install.packages("psych")
```

```
....
```

```
> library(psych)
```

```
> library(sem)
```

- Install the task view installer package
- Make it active
- Install all the packages in the “Psychometrics” task view
- Or, just install one package (e.g., psych)
- Make the psych package active (do this at every startup)
- Make the sem package active (will be automatically done from psych if needed)

# Check the version number for R (should be $\geq 2.11$ ) and for psych ( $\geq 1.0-92$ )

```
> sessionInfo()
```

```
R version 2.12.0 alpha (2010-09-22 r52970)
```

```
Platform: i386-apple-darwin9.8.0/i386 (32-bit)
```

```
locale:
```

```
[1] en_US.UTF-8/en_US.UTF-8/C/C/en_US.UTF-8/en_US.UTF-8
```

```
attached base packages:
```

```
[1] stats      graphics  grDevices  utils      datasets  methods   base
```

```
other attached packages:
```

```

## Basic R commands

R is just a fancy calculator. Add, subtract, sum, products, group

```
> 2 + 2 #addition
```

```
[1] 4
```

```
> 3 ^ 4 #exponentiation
```

```
[1] 81
```

```
> sum(1:10) #summation of a range of numbers
```

```
[1] 55
```

```
> prod(c(1,2,3,5,7)) #products of a set of numbers
```

```
[1] 210
```

It is also a statistics table ( the normal distribution, the t distribution)

```
> pnorm(1)
```

```
[1] 0.8413447
```

```
> pt(2,20) # probability of a t of 2 with 20 observations
```

```
[1] 0.9703672
```

## R is a set of distributions

**Table:** To obtain the density, prefix with  $d$ , probability with  $p$ , quantiles with  $q$  and to generate random values with  $r$ . (e.g., the normal distribution may be chosen by using `dnorm`, `pnorm`, `qnorm`, or `rnorm`.)

| Distribution               | base name | P 1      | P 2       | P 3   | example applica          |
|----------------------------|-----------|----------|-----------|-------|--------------------------|
| <i>Normal</i>              | norm      | mean     | sigma     |       | Most data                |
| <i>Multivariate normal</i> | mvnorm    | mean     | r         | sigma | Most data                |
| <i>Log Normal</i>          | lnorm     | log mean | log sigma |       | income or reaction       |
| <i>Uniform</i>             | unif      | min      | max       |       | rectangular distrib      |
| <i>Binomial</i>            | binom     | size     | prob      |       | Bernuilli trials (e.g. r |
| <i>Student's t</i>         | t         | df       |           | nc    | Finding significance c   |
| <i>Multivariate t</i>      | mvt       | df       | corr      | nc    | Multivariate applici     |
| <i>Fisher's F</i>          | f         | df1      | df2       | nc    | Testing for significan   |
| $\chi^2$                   | chisq     | df       |           | nc    | Testing for significan   |
| <i>Exponential</i>         | exp       | rate     |           |       | Exponential de           |
| <i>Gamma</i>               | gamma     | shape    | rate      | scale | distribution the         |
| <i>Hypergeometric</i>      | hyper     | m        | n         | k     |                          |
| <i>Logistic</i>            | logis     | location | scale     |       | Item Response T          |
| <i>Poisson</i>             | pois      | lambda   |           |       | Count data               |
| <i>Weibull</i>             | weibull   | shape    | scale     |       | Reaction time distr      |

## R does descriptive statistics

Examples can use built in data sets, type `data()` to list all of them, or `data(package="psych")` to see just the ones in the psych package.

```
> library(psych)      #do this once per session to make the package available
> data(bfi)           #get a particular data set
> headtail(describe(bfi),8,6) #show the first and last n lines of the output from describe()
```

|           | var | n    | mean  | sd    | median | trimmed | mad   | min | max | range | skew  | kurtosis | se   |
|-----------|-----|------|-------|-------|--------|---------|-------|-----|-----|-------|-------|----------|------|
| A1        | 1   | 2784 | 2.41  | 1.41  | 2      | 2.23    | 1.48  | 1   | 6   | 5     | 0.83  | -0.31    | 0.03 |
| A2        | 2   | 2773 | 4.8   | 1.17  | 5      | 4.98    | 1.48  | 1   | 6   | 5     | -1.12 | 1.05     | 0.02 |
| A3        | 3   | 2774 | 4.6   | 1.3   | 5      | 4.79    | 1.48  | 1   | 6   | 5     | -1    | 0.44     | 0.02 |
| A4        | 4   | 2781 | 4.7   | 1.48  | 5      | 4.93    | 1.48  | 1   | 6   | 5     | -1.03 | 0.04     | 0.03 |
| A5        | 5   | 2784 | 4.56  | 1.26  | 5      | 4.71    | 1.48  | 1   | 6   | 5     | -0.85 | 0.16     | 0.02 |
| C1        | 6   | 2779 | 4.5   | 1.24  | 5      | 4.64    | 1.48  | 1   | 6   | 5     | -0.85 | 0.3      | 0.02 |
| C2        | 7   | 2776 | 4.37  | 1.32  | 5      | 4.5     | 1.48  | 1   | 6   | 5     | -0.74 | -0.14    | 0.03 |
| C3        | 8   | 2780 | 4.3   | 1.29  | 5      | 4.42    | 1.48  | 1   | 6   | 5     | -0.69 | -0.13    | 0.02 |
| ...       | ... | ...  | ...   | ...   | ...    | ...     | ...   | ... | ... | ...   | ...   | ...      | ...  |
| O3        | 23  | 2772 | 4.44  | 1.22  | 5      | 4.56    | 1.48  | 1   | 6   | 5     | -0.77 | 0.3      | 0.02 |
| O4        | 24  | 2786 | 4.89  | 1.22  | 5      | 5.1     | 1.48  | 1   | 6   | 5     | -1.22 | 1.08     | 0.02 |
| O5        | 25  | 2780 | 2.49  | 1.33  | 2      | 2.34    | 1.48  | 1   | 6   | 5     | 0.74  | -0.24    | 0.03 |
| gender    | 26  | 2800 | 1.67  | 0.47  | 2      | 1.71    | 0     | 1   | 2   | 1     | -0.73 | -1.47    | 0.01 |
| education | 27  | 2577 | 3.19  | 1.11  | 3      | 3.22    | 1.48  | 1   | 5   | 4     | -0.05 | -0.32    | 0.02 |
| age       | 28  | 2800 | 28.78 | 11.13 | 26     | 27.43   | 10.38 | 3   | 86  | 83    | 1.02  | 0.56     | 0.21 |

bfi has 2800 cases on 25 IPIP/SAPA items + 3 demographic items

## R is also a matrix calculator

Calculate covariances from scratch, compare with a built in function

```
> data(sat.act)
> D <- sat.act[2:5]
> M <- colMeans(D)
> C <- t(t(D) - M)
> Cov <- t(C) %*% C/(dim(D)[1]-1)
> round(Cov,digits=2)
```

|           | education | age    | ACT    | SATV     |
|-----------|-----------|--------|--------|----------|
| education | 2.03      | 7.42   | 1.06   | 7.48     |
| age       | 7.42      | 90.22  | 5.06   | -45.42   |
| ACT       | 1.06      | 5.06   | 23.27  | 305.55   |
| SATV      | 7.48      | -45.42 | 305.55 | 12746.99 |

```
> print(cov(D),digits=2)
```

|           | education | age   | ACT   | SATV    |
|-----------|-----------|-------|-------|---------|
| education | 2.0       | 7.4   | 1.1   | 7.5     |
| age       | 7.4       | 90.2  | 5.1   | -45.4   |
| ACT       | 1.1       | 5.1   | 23.3  | 305.5   |
| SATV      | 7.5       | -45.4 | 305.5 | 12747.0 |

## More on matrices: finding correlations

Find the correlation from scratch, find it from formula

```
> M <- colMeans(D)
> C <- t(t(D) - M)
> Cov <- t(C) %*% C/(dim(D)[1]-1)
> Var <- diag(Cov)
> r <- diag(1/sqrt(Var)) %*% Cov %*% diag(1/sqrt(Var))
> round(r,2)
```

```
      [,1] [,2] [,3] [,4]
[1,] 1.00 0.55 0.15 0.05
[2,] 0.55 1.00 0.11 -0.04
[3,] 0.15 0.11 1.00 0.56
[4,] 0.05 -0.04 0.56 1.00
```

```
> r <- cor(D)
> round(r,2)
```

```
      education  age  ACT  SATV
education      1.00 0.55 0.15 0.05
age             0.55 1.00 0.11 -0.04
ACT             0.15 0.11 1.00 0.56
SATV            0.05 -0.04 0.56 1.00
```

# R is also a graphics calculator

## The normal curve

## R is also a graphics calculator

The first line draws the normal curve, the second prints the title, the next lines draw the cross hatching.

```
curve(dnorm(x),-3,3,xlab="",ylab="Probability of z")
title(main="The normal curve",outer=FALSE)
xvals <- seq(-3,-2,length=100)
dvals <- dnorm(xvals)
polygon(c(xvals,rev(xvals)),c(rep(0,100),rev(dvals)),density=2,angle=-45)
xvals <- seq(-2,-1,length=100)
dvals <- dnorm(xvals)
polygon(c(xvals,rev(xvals)),c(rep(0,100),rev(dvals)),density=14,angle=45)
xvals <- seq(-1,-0,length=100)
dvals <- dnorm(xvals)
polygon(c(xvals,rev(xvals)),c(rep(0,100),rev(dvals)),density=34,angle=-45)
xvals <- seq(2,3,length=100)
dvals <- dnorm(xvals)
polygon(c(xvals,rev(xvals)),c(rep(0,100),rev(dvals)),density=2,angle=45)
xvals <- seq(1,2,length=100)
dvals <- dnorm(xvals)
polygon(c(xvals,rev(xvals)),c(rep(0,100),rev(dvals)),density=14,angle=-45)
xvals <- seq(0,1,length=100)
dvals <- dnorm(xvals)
polygon(c(xvals,rev(xvals)),c(rep(0,100),rev(dvals)),density=34,angle=45)
```

## More graphics

It is possible to draw interesting figures, even with base graphics. The `draw.tetra` function is for showing students the relationship between a continuous bivariate normal and the dichotomous tetrachoric correlation.

```
> draw.tetra(.5,1,1)
```

## Useful tools – help finding or using a function

- `? X` #will open the help page for function X- but you need to know X!
- `help(X)` #same thing as `?`
- `?? "X"` #will list the help pages that include the term X.
- `help.search("X")` #same as `??`
- `findFn("X")` #will search a web data base for all packages/functions that have "X", but needs to have the sos package active)
- `? packagename` usually will give an overview of the package and the functions available in that package.
- R Package Manger (on the Mac menu) will display installed packages and allow you to find the index of the package.
- `example(X)` #Runs the examples from the help page for X
- Vignettes #available for many packages - a detailed description of how to use the package

## R Basic concepts: Functions and Objects

```
> q <- 1
> p <- pnorm(q,mean=0)
> p

[1] 0.8413447

> print(p,digits=2)

[1] 0.84

> z <- seq(0,3,.5)
> p <- pnorm(z)
> zp <- data.frame(z,p)
> round(zp,2)

      z      p
1 0.0 0.50
2 0.5 0.69
3 1.0 0.84
4 1.5 0.93
5 2.0 0.98
6 2.5 0.99
7 3.0 1.00
```

- All commands are functions
  - Usually with parameters
  - Sometime without parameters
  - Some functions are implicit
- Functions operate on objects
- Most functions return objects
  - visibly
  - invisibly (use str to see them)
- Objects can be a variety of data structures
  - scalars, vectors, matrices
  - data.frames
  - lists

## The basic commands

- `X <- some.function(Y, with parameters z1 ... zn)`
- `X` (depending upon the function, might be a lot, might be the same as `print(X)`)
- `print(X)` (What the writer of the function that produced `X` thought was important).
- `summary(x)` (What the writer of the function thought was really important).
- `plot(X)` (If the function produces suitable information for a graphic)
- See <http://cran.r-project.org/doc/contrib/Short-refcard.pdf> (a short reference card for many functions)

## Useful tools for using objects

- Remember: the output of any function is an object.
  - What is shown on the screen might be a small subset of what is actually produced
  - The help page for the function should list the various outputs of the function (but sometimes not too clearly)
- `str(X)` (shows the structure of an object, X)
  - The content is somewhat cryptic but does allow one to see what is available to use
- The object will probably have various objects attached to it, these can be retrieved by name, e.g.,
  - `data(bifactor)` #gets a data file including several different data sets (including Thurstone, Bechtoldt.1, etc.)
  - `f3 <- fa(Thurstone,3,n.obs=213)` #factor analyze the Thurstone 9 variable problem with 3 factors
  - `str(f3)` #show the structure (a list of 33 objects)
  - `my.loadings <- f3$loadings` #get the factor loadings matrix

## Basic concepts of using functions

- Most functions are written in R
  - to use a function, just call it with parentheses, e.g.,
    - `y <- fa(X,3) #to factor analyze X with three factors`
  - to see how it works, just call it without the parentheses, e.g.,
    - `fa #several screens of R`
  - Some functions are “hidden” in namespaces but can be seen by calling them,
    - `psych:::polyc`
- Some functions are “primitives” and are written in C. These can be examined by finding the source file.
- Functions can be changed by listing them, editing them, and running them

## Using packages

- More than 2552 packages are available for R (and growing daily)
- Can search all packages that do a particular operation by using the sos package
  - `install.packages("sos")` #if you haven't already
  - `library(sos)` # make it active once you have it
    - `findFn("X")` #will search a web data base for all packages/functions that have "X"
    - `findFn("factor analysis")` #will return 1907 matches and reports the top 400
    - `findFn("Item Response Theory")` # will return 114 matches
- `install.packages(X)` will install a particular package (add it to your R library – you need to do this just once)
- `library(X)` #will make the package X available to use if it has been installed (and thus in your library)

## A small subset of very useful packages

- General use
  - lattice
  - lme4 (core)
  - MASS
  - psych
  - Zelig
- Special use
  - ltm
  - sem
  - OpenMx
  - GPArotation
  - mvtnorm
  - > 2550 known
  - + ?
- General applications
  - Lattice or Trellis graphics
  - Linear mixed-effects models
  - Modern Applied Statistics with S
  - Personality and psychometrics
  - General purpose toolkit
- More specialized packages
  - Latent Trait Model
  - SEM and CFA (one group)
  - SEM and CFA (multiple groups +)
  - Jennrich rotations
  - Multivariate distributions
  - Thousands of more packages on CRAN
  - Code on webpages/journal articles

## An example package: psych

- The psych package is meant to be useful for basic data analysis for psychologists with a particular emphasis upon psychometrics and personality research
  - Some of the functions are used in an undergraduate research methods course and an advanced course in personality research
  - Additional functions used in graduate courses on psychometric theory and an introduction to sem
- Vignettes give detailed information and examples of using psych (are included in the psych package but may also be downloaded from <http://personality-project.org/r/book/>)
  - Overview (<http://cran.at-r-project.org/web/packages/psych/vignettes/overview.pdf>)
  - Psych\_for\_Sem ([http://cran.at-r-project.org/web/packages/psych/vignettes/psych\\_for\\_sem.pdf](http://cran.at-r-project.org/web/packages/psych/vignettes/psych_for_sem.pdf))
- `data(package = "psych")` #lists 38 different data sets included in psych

## Overview of psych package – selected functions

- Descriptives
  - describe, describe.by
  - pairs.panels, error.bars, error.bars.by
- latent variable analysis
  - fa, iclust, principal,
  - irt.fa
- reliability analysis
  - score.items
  - omega, omegaSem
- graphic displays
- simulation
  - sim.structure, sim.minor, sim.hierarchical
  - sim.items, sim.irt, sim.congeneric,
  - sim.simplex, sim.omega
- preprocessing for sem

# Data description

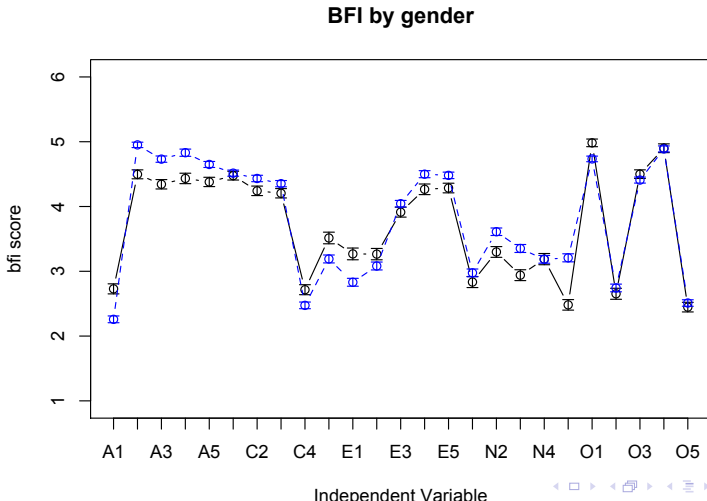

```
> data(sat.act)
> describe(sat.act)
```

|           | var | n   | mean   | sd     | median | trimmed | mad    | min | max | range | skew  | kurtosis | se   |

## error.bars.by for the bfi items

```
data(bfi)
error.bars.by(bfi[1:25],bfi$gender,main="BFI by gender",ylab="bfi score")
```

## Create a hierarchical model - factor the model

```
> my.data <- sim.hierarchical()
> f3 <- fa(my.data,3)
> f3
```

Factor Analysis using method = minres

Call: fa(r = my.data, nfactors = 3)

Standardized loadings based upon correlation matrix

With factor correlations of
      MR1 MR2 MR3
MR1 1.00 0.71 0.51
MR2 0.71 1.00 0.39
MR3 0.51 0.39 1.00
```

Test of the hypothesis that 3 factors are sufficient.

## Plot the 3 factors

```
fa.diagram(f3)
```

### Factor Analysis

# Do a Schmid Leiman transformation and find omega

```
om <- omega(my.data$observed)
omega.diagram(om, cut=.15)
```

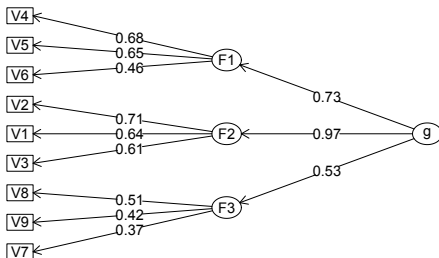

**Omega with Schmid Leiman Transformation**

# Show the same result, but with a hierarchical solution

```
> omega.diagram(om,cut=.15,s1=FALSE,digits=2)
```

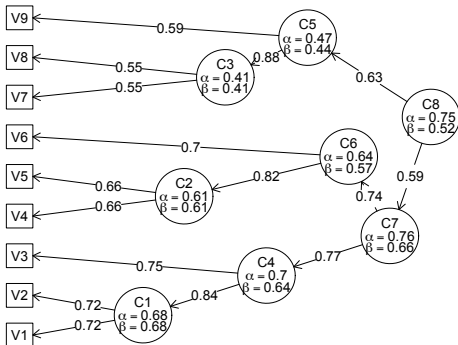

## Hierarchical (multilevel) Structure

## Compare to a hierarchical cluster analysis

```
> iclust(my.data$observed)
```

iclust

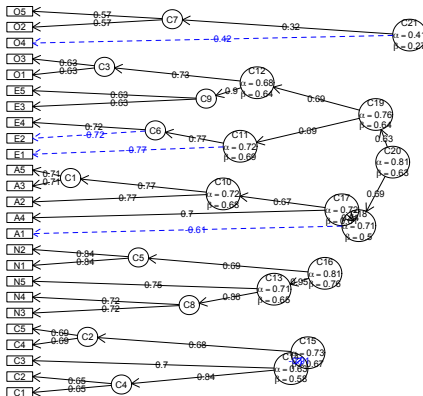

Latent variable analysis through factor analysis and cluster analysis

## Item Cluster Analysis (iclust) of BFI – Pearson correlations

```
> data(bfi)
> ic <- iclust(bfi[1:25])
```

25 SAPA bfi items

- 25 BFI items from SAPA (from 100)
- 2800 SAPA subjects
- Pearson Correlations

Latent variable analysis through factor analysis and cluster analysis

## Item Cluster Analysis (iclust) of BFI – Polychoric correlations

```

> data(bfi)
> bfi.poly <- polychoric(bfi[1:25])
> ic <- iclust(bfi.poly$rho)

```

iclust of bfi - polychoric correlations

- 25 BFI items from SAPA (from 100)
- 2800 SAPA subjects
- Polychoric Correlations

Item Response Theory through factor analysis

# Item Response Theory analysis of homebrewed IQ items

```
> data(iqitems)
> iq.keys <- c(4,4,3,1,4,3,2,3,1,4,1,3,4,3)
> iq.tf <- score.multiple.choice(iq.keys,iqitems,score=FALSE) #just the responses
> iq.irt <- irt.fa(iq.tf)
> plot(iq.irt)
```

Item information from factor analysis

- 14 SAPA iq items (from 56)
- 1000 SAPA subjects
- Not screened for missing responses!
- factor analysis of tetrachoric correlations
- fa parameters -> irt parameters

## Omega analysis of iq items with tetrachoric correlations

```
> om.iq <- omega(iq.irt$rho)
```

```
> omega.diagram(om.iq,sl=FALSE,main="omega of 14 iq items with tetrachoric correlatio
```

omega of 14 iq items with tetrachoric correlations

- tetrachorics were found by irt.fa
- 14 SAPA iq items (from 56)
- 1000 SAPA subjects
- F1 are geometric analogies
- F2 are reasoning and vocabulary
- F3 are number series + reasoning

# Simulations of distributions

- Simulation of item structures
  - `sim.irt`, `sim.rasch`, `sim.npl` (unidimensional structures)
  - `sim.congeneric`
  - `sim.item` (2 dimensional structures, simple structure or circumplex)
- Simulation of test structures
  - `sim.hierarchical` (hierarchical test structure)
  - `sim.simplex`
  - `sim.minor` ( $n$  major factors,  $nvar/2$  minor factors)

## Conclusion

- R is “easy” to use
- Multiple packages are available
- psych package is appropriate for many analyses in personality and psychometrics
- Program development is straightforward
- Use of R should be encouraged for us, for our students
- General invitation for SMEP members to add to the psych package
- Should we create a smep package?
